

# SMART Arrow Board™

Easy, Real-Time Connection Between Work Zone's and Vehicles

After-Market device that can be installed on most Arrow Boards in the market today. The "Device" intercepts signal from the Arrow Board and automatically updates the State Traveler Information System (TIS). The TIS data is typically made available to a 3<sup>rd</sup> party, which uses the data to auto populate in-vehicle navigation systems and mobile devices. Works in Mobile Operations. Archived Arrow Board information also helps with DOT project management.
