TRUCKS ENTERING SYSTEM

ALERT MOTORISTS, IN REAL-TIME, TO SLOW-MOVING CONSTRUCTION VEHICLES ENTERING TRAFFIC

Product Features

FEATURE	DETAILS
Application	The trucks entering system is a custom solution for managing both Truck Exiting and Trucks Entering the roadway. Examples of typical applications are: work zones, haul roads, intersection crossings, rural bus routes, oil fields, police & fire stations, and mining operations.
Ways to alert	Trucks entering system detects and sends an advanced warning to motorists by activating a changeable message sign with flashing lights or a flasher trailer.
Monitoring and Reporting	Entry and exit information can be viewed in real-time using the Automation Software. Data is archived by the minute allowing you to analyze how the traffic impacts a specific work zone and its effect on the driving public. Email/SMS alerts can be sent based on traffic queuing conditions, as well as other system issues.
Flexible	Custom applications, and specific equipment platforms, are also available. Whatever the application, Street Smart has the equipment for you.
Delivery	Available to rent anywhere in the USA and Canada.

TRUCKS ENTERING SYSTEM

The smart sensor box detects the presence of trucks entering from the work zone onto the road using side fire or directional presence detection. The trailer also includes an HD camera and real-time video with email/SMS alerts.

The changeable message sign or flasher trailer sign will then alert motorists, in real-time, of the truck entering the roadway.
